Fahim Bavan

Aspiring AI Engineer

Ahmedabad, Gujarat | +91 9016514932 | fahimbavan631@gmail.com | LinkedIn | GitHub | Portfolio

Summary

Aspiring AI Engineer experienced in building AI-powered applications using Python, LLMs, RAG, and AI agents. Skilled in LangChain, LangGraph, FastAPI, vector databases, and full-stack development, focused on building practical AI solutions.

Technical Skills

Programming Languages: Python, JavaScript, HTML, CSS

AI Technologies: LLMs, Prompt Engineering, RAG, Embeddings, Semantic Search, AI Agents, Multi-Agent Systems, MCP

AI Frameworks & Models: LangChain, LangGraph, Hugging Face, Groq, Mistral

Databases & Vector Stores: MongoDB, FAISS, Qdrant, MongoDB Atlas

Backend & Web Development: FastAPI, Node.js, Express.js, React.js, REST APIs, JWT Authentication, Tailwind CSS, Bootstrap

Tools, DevOps & APIs: Git, GitHub, Postman, Render, Docker, Tavily, AviationStack, OpenWeather

Projects

ResearchMind - AI Research Assistant Live Demo | GitHub

- Built an AI research assistant using React.js, Python, Mistral AI, LangChain, and Tavily to generate reports from research topics.
- Designed a multi-stage pipeline for web search, web content extraction using BeautifulSoup, content synthesis, and report generation.
- Implemented writer and critic chains to generate research reports and review their quality.
- Stored research data in Qdrant using Hugging Face embeddings for semantic retrieval.
- Integrated the research pipeline with the React frontend through REST APIs and managed API keys using environment variables.
- Developed a React dashboard for pipeline progress and reports, and deployed the application on Render.

TripAI - AI Travel Planning Assistant Live Demo | GitHub

- Developed an AI travel planner using Python, FastAPI, LangGraph, MCP, and MongoDB Atlas.
- Orchestrated workflows for flights, hotels, weather, and itineraries using shared state and MongoDB Atlas checkpoints keyed by thread ID.
- Integrated AviationStack, Tavily, and a custom OpenWeather MCP server as external tools.
- Used Groq LLMs to extract travel requirements, process travel information, and generate itineraries.
- Exposed application functionality through FastAPI REST endpoints and deployed the application on Render.
- Built a web interface with PDF export and containerized the application using Docker.

CampusAI - College AI Assistant Live Demo | GitHub

- Developed a college AI assistant using React.js, FastAPI, LangChain, LangGraph, and Groq to answer academic and fee-related questions from official PDFs.
- Implemented document retrieval using PyPDFLoader, recursive text chunking, Hugging Face embeddings, and FAISS semantic search.
- Designed LangGraph workflows for query classification, document retrieval, context processing, and answer generation.
- Built a React chat interface with conversation history, suggested questions, Markdown rendering, copy/regenerate actions, and feedback controls.
- Integrated the AI pipeline through FastAPI endpoints and deployed the application on Render.

Education

LJ University Ahmedabad, Gujarat

B.Sc. in Information Technology (Artificial Intelligence) *2023 – Present*

Latest Semester SPI: 8.21 (Semester 4)

Hackathons & Achievements

- **Hackathon Participant, VORTEX 2K26 | Global AI Innovation Hackathon** Oct 2026
  Participated in a global AI innovation hackathon organized by Innovation Hacks.
- **Hackathon Participant, Hack Devengers 2.0** Sep 2026
  Built and submitted a project within the hackathon time limit.
- **Hackathon Participant, Hackovate LJ 2025** 2025
  Built a team project under time constraints; organized by LFA, LJ University.
